Portfolio: https://muhammed-ahmedgithup.github.io/Muhammad.github.io/

Profile

Data Scientist and Machine Learning Engineer with experience building predictive models, deep learning systems, and data-driven applications. Skilled in data preprocessing, feature engineering, model training, and deploying machine learning solutions. Experienced with Python, TensorFlow, and Scikit-learn to develop scalable AI solutions. Strong background in data analysis, full-stack ML deployment.

EXPERIENCE & INTERNSHIPS

Machine Learning Intern
Digital Egypt Pioneers Initiative (DEPI) | Dec 2024 – Apr 2025

- Trained in Python for Data Science and Machine Learning.
- Built and evaluated ML models using Scikit-learn.
- Performed data cleaning, preprocessing, and model validation on real-world datasets.
- Applied model validation techniques including cross-validation and performance evaluation.

Education

Assiut University
Bachelor of Computers and Information
09/2021 – 07/2024 | Assiut, Egypt

- **Graduation Project:** Fall Detection System
  Achieved a grade of **A+**, utilizing advanced machine learning and data processing techniques.

TECHNICAL Skills

- **Programming Languages:** Python, Java, C++, C, C#
- **Machine Learning:** Supervised Learning, Unsupervised Learning, NLP, Recommender Systems
- **Deep Learning:** ANN, CNN, RNN, TensorFlow, Keras
- **Data Analysis & Visualization:** Pandas, NumPy, Matplotlib, Seaborn, Plotly, Power BI
- **Databases:** MySQL, MongoDB
- **MLOps & Deployment:** Docker, GitHub Actions, CI/CD
- **Version Control:** Git, GitHub

PERSONAL SKILLS

- Teamwork & Communication
- Demonstrates rapid learning ability and strong self-motivation

- Adaptability and curiosity
- Problem Solving

Projects

1. **Handwritten Digits Classification** – Built CNN with TensorFlow using data augmentation (rotation/zoom) to improve accuracy. GitHub Link
2. **Bengaluru House Price Prediction** – Full-stack app with React/Flask; trained model with feature engineering for price estimation. GitHub Link
3. **Flowers Classification** – Developed CNN for flower species classification using data augmentation for better generalization. GitHup Link
4. **Face Recognition System** – Real-time face detection/recognition using ML and computer vision for security applications. GitHub Link
5. **Food Delivery Chatbot** – AI chatbot for menu browsing, order placement, and delivery tracking using NLP. GitHub Link
6. **Breast Cancer Classification** – Achieved 99% accuracy using deep learning; compared multiple ML models. GitHub Link
7. **Heart Disease Prediction** – Used Logistic Regression to predict heart disease with 86% accuracy. GitHub Link
8. **Credit Card Fraud Detection** – Applied multiple classifiers achieving 80-88% accuracy for fraud detection. GitHub Link
9. **E-commerce Analysis** – Data cleaning, visualization, and customer segmentation using K-means clustering. GitHub Link
10. **Bike Sales Dashboard** – Built interactive Excel dashboard to visualize sales trends and KPIs. GitHub Link
11. **Layoffs Data Analysis** – Analyzed global layoffs trends using advanced SQL queries. GitHub Link
12. **India Unemployment Analysis** – Comprehensive unemployment data analysis using Python. GitHub Link
13. **Movie Rating Analysis** – Examined movie rating trends and patterns using Python. GitHub Link

COURSES & Certificates

- Machine Learning Specialization — DeepLearning.AI
- Machine Learning with Python — IBM
- Data Analysis with Python — IBM
- Data Visualization with Python — IBM
- Deep Learning Fundamentals — IBM
- Exploratory Data Analysis for Machine Learning — IBM
